RESISTE

RESISTE contains AP 2001, an exclusive patented fraction of North American Ginseng, the most sophisticated, well-researched, natural immune enhancer in the world. Many health professionals believe that an animal's immune system is the best natural protection it has against the inevitable influences of today's environment.

RESISTE is effective in situations where bacteria is the underlying cause of the problem. The product has been used successfully to treat gum and skin conditions. In breeds prone to watery eyes and ears, AP 2001 has shown to have a very beneficial drying effect. This product has been used for such broad based conditions as urinary tract problems, as well as to treat chronic and temporary pulmonary problems. One of the beneficial side effects of a strong immune system is increased energy for your pet.

AP 2001 has been reviewed under the aegis of Health Canada and it has been tested at 500 times the recommended dose with no adverse reactions of significance.

Indications: A weakened immune system results in a variety of chronic, ill-health symptoms ranging from bacterial infections of the skin or gums, watery eyes, infected ears, some urinary tract problems and chronic, pulmonary problems.

Standardized Fractions by Weight:
Ginseng - AP 2001 - 100 mgs.

KINESA

KINESA is critical for a healthy, happy animal. Whether the concern is a lack of exercise, athletic performance or ageing, Joint Ease can quickly make a difference.

KINESA is an effective mixture of pure Glucosamine HCL and AP 2001, an exclusive, patented fraction of North American Ginseng. While the benefits of Glucosamine HCL are widely known, we have taken another step to improve the animal's ease of motion, with the addition of AP 2001. This specific fraction of Ginseng serves to enhance the animal's own immunizing activities, while at the same time, allowing the Glucosamine HCL to reduce joint problems. Results can often be seen within a few days.

Our Shark Cartilage preparation AP 18005, is a tremendous source of natural Chondroitin, and is guaranteed to be 100% absorbable in the body.

Indications: Inability / limited willingness to run, jump, or climb, with an irritability towards other animals wanting to play.

Standardized Fractions by Weight:
Ginseng - AP 2001 - 20 mgs.
Glucosamine HCL - 160 mgs.
Shark Cartilage - AP 18005 - 40 mgs.

RELAXEN

RELAXEN has been successfully administered to dogs and cats exhibiting a variety of symptoms all related to stress in the animal. Separation anxiety is a common diagnosis related to pets who are under stress. Common examples of stress related behaviour is spraying of cats and barking and lunging of dogs.

For the cat or dog owner who show their animal professionally or the pet lover getting ready to leave their dog or cat for holiday, the problem is always the same. How can you have a happy and contented pet whose behaviour does not change as you change their environment?

Our research has shown that dosage combination of our proprietary Ginseng AP 1001 with standardized Ginkgo biloba is effective in relief of stress. Cats or dogs who might otherwise be taking psychotropics or other drugs, have shown a remarkable response to this mixture, and without side effects.

Indications: Hyper activity in stressful situations. In dogs, the stress is shown as aggressive behaviour such as barking, lunging or growling. In cats, stress is demonstrated by spraying or destroying furniture or failure to use the litter box.

Standardized Fractions by Weight:
Ginseng - AP 1001 - 80 mgs.
Ginkgo biloba - 20 mgs.
